PROFILE

Purdue University Computer Science student pursuing software engineering internships, with experience developing database-backed web applications and troubleshooting Linux-based systems. Interested in backend and systems engineering, with hands-on experience in C, Python, Java, SQL, and JavaScript.

PROFESSIONAL EXPERIENCE

AQ Group | Digital Mining | Astana, Kazakhstan

October 2023-January 2024

Software Development & IT Intern

- Developed Python scripts to automate recurring data-processing and administrative workflows, reducing manual effort for internal teams.
- Diagnosed and resolved software, hardware, connectivity, and account-access issues for 35+ employees, improving the reliability of company systems.
- Collaborated with employees to translate operational requirements into practical technical solutions and reusable workflows.
- Documented application behavior, technical issues, and troubleshooting procedures to improve maintainability and future support.

PROJECTS

InternTrack | Internship Discovery and Application Platform | *Python, Flask, PostgreSQL, REST APIs, HTML/CSS, Bootstrap*

- Built a full-stack platform that retrieves internship listings from the Adzuna API and centralizes application tracking through a personalized dashboard.
- Implemented secure authentication, protected routes, server-side sessions, and password hashing to manage user accounts and application data.
- Designed a relational database supporting application creation, status updates, filtering, and user-specific records.

Online Marketplace | *Java, Java Sockets, Swing, JUnit, File I/O*

- Collaborated on a multithreaded marketplace supporting user authentication, product listings, search, payments, seller ratings, and direct messaging.
- Developed a synchronized messaging system that allowed concurrent users to send, retrieve, delete, and persist text and image messages.
- Created JUnit tests and applied interface-based object-oriented design to validate messaging functionality, file persistence, and error handling.

Fortune 500 Job Tracker | *Python, REST APIs, Requests, JSON, Pytest, GitHub Actions*

- Built an automated data pipeline that retrieves and normalizes job postings from 20+ Fortune 500 companies across Greenhouse, Lever, and Workday hiring platforms.
- Implemented pagination, employment-type classification, job-category grouping, duplicate detection, and failure handling while processing more than 5,000 active listings.
- Automated repository updates through GitHub Actions and generated searchable Markdown listings organized by internship, full-time status, company rank, category, and location.

LEADERSHIP

Python & Mathematics Tutor | Present

- Taught introductory Python and mathematics to approximately 150 students across five classes through interactive lessons and hands-on exercises.
- Designed lessons covering Python fundamentals, algorithmic thinking, algebra, and structured problem-solving.
- Provided individualized debugging and academic support, helping students recognize mistakes and solve problems independently.

EDUCATION

Purdue University, College of Science

Expected May 2028

Bachelor of Science in Computer Science

RELEVANT SKILLS

Programming: Python, Java, C, JavaScript, SQL, Bash, HTML/CSS

Frameworks & Libraries: Flask, Bootstrap

Databases: PostgreSQL, SQLite

Libraries & Testing: Bootstrap, JUnit, Pytest

Developer Tools: Git, GitHub, Linux, GitHub Actions, GDB, Valgrind

Concepts: Relational Database Design, Object-Oriented Programming, Data Structures and Algorithms, Multithreading, Client-Server Architecture
